

## Ecoke Sustainability Policy

### MISSION

CPL aims to produce a product (ecoke<sup>®</sup>) from sustainable charcoal for use in industry and energy production.

### VISION

CPL wants to become a benchmark for sustainable development, supplying its customers with a quality product that contributes to the reduction of GHG emissions and the fight against climate change.

### VALUES

CPL shares the following values, which should characterize its sustainable growth guiding the transition from its mission to its vision and which are aligned with the United Nations Sustainable Development Goals (SDGs) related to clean, sustainable energy, and climate action:

- Consume charcoal from sustainable biomass as raw material for the manufacture of ecoke<sup>®</sup>, minimizing the environmental impacts of our activity and promoting good environmental practices throughout the value chain.
- Ensure compliance with applicable legal requirements, while striving to do what is technically and economically feasible and best from a sustainability perspective.
- Contribute to the fight against climate change by reducing greenhouse gas emissions and promoting the use of clean and sustainable energies.

In addition, for the record, for the appropriate purposes, I hereby sign this Sustainability Policy in Immingham, North Lincolnshire, U.K., on 20/05/2024

Signed: Mr. Steve Anson (Managing Director)
